JULY 2026

VISUAL IDENTITY

THE MMA SEAL: REPRESENTING MISSION THROUGH DESIGN

SYMBOLISM

The Marine Minerals Administration seal reflects the Bureau's identity as the Department of the Interior's integrated offshore resource management bureau. Its elements symbolize the Marine Minerals Administration's enduring responsibility to manage the Nation's offshore energy and marine mineral resources throughout the offshore resource lifecycle. Together, they represent the Bureau's commitment to scientific understanding, engineering excellence, environmental stewardship, operational oversight, regulatory accountability, and the responsible stewardship of offshore public resources on behalf of the American people.

- The **eagle** represents the Federal Government's stewardship of public resources.
- The **shield** symbolizes the protection of the public interest through responsible administration.
- The **offshore platform** represents offshore energy and marine mineral operations.
- The **waves** represent the offshore environment and long-term stewardship of the Outer Continental Shelf.
- The **hexagonal mineral pattern** represents marine mineral resources and the bureau's scientific and technical mission.
- The **stars and colors** reinforce the bureau's identity within the Department of the Interior and the Federal Government.

VISUAL IDENTITY

THE MARINE MINERAL ADMINISTRATION BRAND

PURPOSE

The Marine Mineral Administration (MMA) brand represents who we are and how we communicate with the public, stakeholders, and our partners. It is expressed through our logo, color palette, photography, typography, and official document templates. Consistent use of these elements strengthens recognition, builds public trust, and reinforces the Bureau's commitment to promoting safety, protecting the environment, and conserving resources throughout the U.S. Outer Continental Shelf.

BRAND STANDARDS

A consistent visual identity is essential to maintaining a strong and professional brand. All public-facing communications—including presentations, websites, brochures, fact sheets, reports, and other outreach materials—should follow the Bureau's approved branding standards.

To ensure quality and consistency:

- Use only approved, unedited Microsoft Word and PowerPoint templates.
- Use official logos, colors, fonts, and photography.
- Apply branding consistently across all communication products.

GOVERNANCE AND SUPPORT

This guide provides the foundational standards for using the Bureau's brand but cannot address every situation. The Office of Communication (OOC) is responsible for managing the Bureau's brand identity, providing guidance, developing branded materials, and ensuring consistent application of brand standards.

Questions regarding branding should be directed to the Office of Communication. Any exceptions to these standards require written approval from OOC.

ACCESSIBILITY (SECTION 508 COMPLIANCE)

The Bureau is committed to ensuring that all information and communication technology is accessible to employees and members of the public with disabilities in accordance with Section 508 of the Rehabilitation Act of 1973, as amended. All documents, presentations, and other communication products must be developed to meet or exceed Section 508 accessibility requirements.

SEAL USAGE

FULL-COLOR SEAL

The full-color seal should be used carefully based on the colors around it and layout of the materials.

EXAMPLE

Reports, letterhead, social media, videos, and presentations.

BLACK-AND-WHITE SEAL

The black-and-white seal should be used rarely. This seal could be used, for example, in a publication that is only available in greyscale or on a web page with a white background.

EXAMPLE

Letterhead or a PDF that will be printed in black and white.

ONE-COLOR SEAL

The one-color seal should be used sparingly and only in dark colors on plain backgrounds, as white or light colors make it hard to read. Engravings should be made with the one color seal.

SEAL USAGE

SIZE AND SPACING IN PRINT

The Marine Mineral Administration seal should never be displayed at a smaller width than 0.75 inches. Use the approximate height of the top of the offshore platform to the bottom as a spacing guide. This should be the minimum amount of space left around the seal when placed with other seals, images, or text.

IMPROPER SEAL USAGE

The following is a non-comprehensive list of improper usage of the seal. As a general rule, do not modify the seal in any way.

Note: To prevent the logo from becoming distorted when resizing it, hold down the Shift key while dragging a corner handle. This maintains the logo's original aspect ratio and ensures it remains proportionate.

DO NOT
Stretch, skew, or
squeeze.

DO NOT
Add drop shadows
or gradients.

DO NOT
Use greyscale.

DO NOT
Put too close to
other seals.

DO NOT
Use one that is
low in resolution.

DO NOT
Remove any part.

TYPOGRAPHY

HEADLINES

Century Gothic Bold is used for headlines and display text. Its geometric, sans-serif design that gives headlines a contemporary, professional look. This can help position the Marine Minerals Administration as a forward-looking, science- and technology-driven organization. The minimum weight used for display text should be regular. The bold weight creates clear visual hierarchy, making headlines easy to notice in reports, presentations, signage, brochures, and digital communications.

BODY COPY

Calibri is used for body text and supplementary headings. It complements Century Gothic Bold by providing a readable and versatile typeface for various applications. Unlike Century Gothic, Calibri is optimized for extended reading. It reduces visual fatigue when reading multiple pages or dense informational content. Calibri is included with Microsoft Office and is supported across many devices and operating systems, helping maintain a consistent appearance across documents and presentations.

VISUAL ELEMENTS

HEXAGON PATTERN

Using the hexagon pattern from the Marine Minerals Administration seal as a recurring design element creates a strong visual connection to the Bureau's official identity while giving branded materials a modern and cohesive look. The hexagonal forms evoke the natural structure of minerals and crystalline formations, reinforcing Bureau's mission of responsible mineral resource management. At the same time, the pattern adds texture, depth, and visual interest without competing with key messaging, making it a distinctive branding element that is both meaningful and memorable across print and digital communications.

Note: Use the hexagon pattern as a secondary graphic element. Apply the pattern in Steel Blue or Gold at 10% opacity to create a subtle texture without competing with core brand messaging.

ABOUT THE MARINE MINERALS ADMINISTRATION

Most offshore energy activity occurs far from shore, out of public view, in federal waters where conditions are demanding and margins for error are small. Offshore platforms, drilling operations, wells, and pipelines require constant attention to safety, system integrity, and environmental protection.

Established in 2011 within the United States Department of the Interior, the Bureau of Safety and Environmental Enforcement carries out federal oversight of offshore energy operations on the United States Outer Continental Shelf. Congress assigned the Department responsibility for offshore energy development under the Outer Continental Shelf Lands Act. The Bureau was created to carry out safety, environmental protection, and enforcement functions once offshore operations are authorized.

The Bureau is a federal regulatory and enforcement agency. It does not decide whether offshore energy development occurs. Its role begins once activity has been approved and focuses on ensuring offshore operations are conducted safely, in compliance with federal law, and in a manner that protects workers, the environment, and offshore resources.

WHAT THE UNITED STATES OUTER CONTINENTAL SHELF IS

The United States Outer Continental Shelf consists of federal submerged lands located offshore of the United States coastline beyond state jurisdiction. Most offshore energy production in the United States occurs in these federal waters.

Operations on the Outer Continental Shelf span a wide range of water depths and environmental conditions. Some facilities operate in relatively shallow water, while others are located far offshore in deeper water where operations may involve high temperatures and high pressure conditions. Across these environments, offshore operations involve complex industrial systems that require consistent federal oversight.

WHAT THE BUREAU OVERSEES

The Bureau oversees offshore oil, gas, sulphur, and renewable energy operations once those activities have been authorized through federal processes. Oversight continues throughout the operational life of offshore energy infrastructure, from initial activity through decommissioning.

WHY OFFSHORE OVERSIGHT MATTERS

Offshore operations rely on large industrial systems operating under challenging marine conditions. When those systems fail, the consequences can include injuries to workers, environmental harm, and operational disruptions.

Offshore production from the United States Outer Continental Shelf accounts for a significant share of domestic oil and natural gas supply. That level of activity in federal waters requires strong and consistent oversight focused on safety, environmental protection, and operational integrity.

Production operations.
Drillstreaming and end-of-life activities.
Operations, production systems, safety equipment, and related

Environmental standards, and responding effectively when incidents occur.
Title 30 of the Code of Federal Regulations, Part 250.

Technical Oversight
Offshore operations plans, equipment, and safety equipment, and safety equipment, and safety equipment.

Environmental Protection
The Bureau oversees self-protection measures and environmental compliance related to offshore operations. It also reviews and inspects oil spill response preparedness and equipment.

Regulatory Development

The Bureau also supports the development and updating of federal offshore safety and environmental regulations. Regulatory improvements are informed by inspection findings, incident investigations, operational data, and lessons learned from offshore operations.

Its workforce includes inspectors, engineers, scientists, investigators, and technical specialists located in Washington, District of Columbia, and in offshore regions close to the facilities and operations they oversee.

BUREAU'S ROLE IN PRACTICE

Much of the Bureau's work is preventative. Inspectors, engineers, and technical specialists identify risks, require corrective action, and enforce federal safety and environmental standards throughout the life of offshore facilities.

Through inspections, engineering oversight, enforcement, and incident investigations, the Bureau provides continuous federal oversight of offshore energy operations on the United States Outer Continental Shelf, helping ensure these resources are developed safely, responsibly, and reliably.

QUESTIONS?

CONTACT INFORMATION

VISUAL ELEMENTS

WAVE ELEMENT

The wave element adds movement, energy, and a sense of progression to the brand identity. While the circular seal communicates authority, tradition, and institutional credibility. Incorporating a flowing wave introduces a dynamic quality that reflects motion, adaptability, and the active relationship between offshore operations and the marine environment.

It can be used as a footer on documents to create a consistent branded foundation, as a header accent to add visual interest, or as a subtle background watermark to reinforce identity without overwhelming important content. The wave can also function as a divider between sections, helping organize information while maintaining a cohesive look, or be repeated as a pattern on displays, presentations, and environmental graphics. Beyond digital and print materials, the wave can extend to physical branding applications such as apparel, promotional items, signage, and event displays, creating a recognizable visual connection across all touchpoints. By serving as a flexible and recognizable design feature, the wave strengthens brand continuity while communicating movement, connection, and the organization's relationship with the marine environment.

Note: Use the wave element apply the pattern in Steel Blue and Navy Blue at 10% opacity to create a subtle texture without competing with core brand messaging.
